

Mahdi Tasha

Frontend Developer · React · Next.js · TypeScript

Frontend Engineer with 6+ years turning complex requirements into fast, polished production interfaces using React, Next.js, and TypeScript. Trusted by clients across travel, fintech, and productivity to own projects end-to-end — from Figma to deployment — with zero hand-holding required. Known for dropping into unfamiliar codebases fast and shipping reliably on deadline, even under shifting requirements. Currently sharpening fundamentals through an Associate Degree in Computer Engineering.

Experience

Sevin Team

Remote

Frontend Engineer

January 6, 2025 - Present

Build and maintain production interfaces within a collaborative engineering team, turning Figma designs and product requirements into responsive, accessible UIs. Own component architecture for shared/reusable pieces used across multiple features, reducing duplicated UI logic. Debug and resolve complex frontend issues spanning state management, API integration, and cross-browser behavior. Work directly with backend engineers to define API contracts before implementation.

<https://sevinhost.ir/host>

Self-Employed / Freelance

Remote

Frontend Engineer

September 2020 – Present

Work directly with clients to scope, build, and ship production web applications, owning the full lifecycle from requirements through deployment. Handle ambiguous or evolving requirements independently — clarifying scope with clients, making architecture decisions, and adjusting scope without derailing timelines. Built and maintained multiple client projects in parallel using React, Next.js, and TypeScript, prioritizing maintainable, scalable code over quick fixes.

Projects

Safarnameh24

2025 - Now

Built core interfaces for a live travel booking platform — search, listing, and booking flows — integrating with a REST API for real-time pricing and availability. Focused on responsive behavior across mobile and desktop, and on making the booking flow feel fast despite multiple chained API calls (loading states, optimistic UI, caching).

<https://safarnameh24.com/>

ZarvanTrip

2025

Delivered frontend for a client-facing travel product from design handoff to production, implementing multiple page templates and full integration with the booking backend. Worked directly with the client to adapt scope as requirements shifted mid-project.

<https://zarvantrip.com/>

Finance System

2025 - Now

Build data-heavy dashboards, forms, and validated data-entry flows for a business-facing financial system, using React Hook Form and Zod for robust client-side validation. Designed reusable table and chart components to keep the codebase consistent as new views were added.

<https://finance.sevintm.com/>

Glyph

2026

Solo-built a lightweight WYSIWYG Markdown editor, solving the core technical challenge of keeping rich-text editing state in sync with raw Markdown output in real time. Handles Markdown parsing, rendering, and file export, structured for future extensibility.

<https://glyph-sigma.vercel.app/>

Brainmark

2026

Solo-built a productivity app for capturing and organizing ideas, architected around reusable, strongly-typed TypeScript components. Focused on interaction design and responsive behavior to keep the core capture-and-organize flow fast and frictionless.

<https://brainmark.vercel.app>

Relog

2026

Solo-built an AI-powered SaaS tool that turns a GitHub repository's commit history into structured, professional release notes — no login or GitHub OAuth required. Built the full pipeline: GitHub API integration (Octokit) for commit analysis, AI generation (Grok) for categorized output, and a Tiptap-based WYSIWYG editor so generated notes stay fully editable before export to Markdown. Focused on a frictionless flow (paste URL → generate → edit → export) despite the async nature of repo analysis and AI generation.

<https://relog-inky.vercel.app/>

EvolveOS

2026

Solo-built a local-first, markdown-powered personal growth system — daily planning, journaling, habit tracking, and task management in one opinionated, offline-first tool. Designed around markdown files for data portability and ownership rather than a cloud-dependent database, prioritizing speed and a minimal UI over feature bloat.

<https://evolveos.vercel.app/>

Skills

</> Frontend Development

React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Sass/SCSS

⌘ UI Engineering

Figma-to-Code, Responsive Design, Accessibility, Design Systems

📦 Application Development

REST APIs, Authentication (JWT), State Management, Forms & Validation (React Hook Form and Zod)

📈 Performance & Quality

SEO, Debugging, Performance Optimization

Education

Islamic Azad University, Islamshahr Branch

Associate Degree (A.S.)

Computer Engineering

Islamshahr, Iran • 2023 - Now

Pursuing an Associate Degree in Computer Engineering with an emphasis on software development, programming fundamentals, algorithms, databases, and computer systems. Complementing academic studies with extensive hands-on experience in modern frontend engineering, including React, Next.js, TypeScript, and scalable web application development.

Shahid Mojtahedi High School

High School Diploma

Experimental Sciences

Iran, Tehran • 2020 - 2023

Completed secondary education with a focus on the Experimental Sciences curriculum.
